## Machine Data Recording

**Current machine data for an optimum production overview – more than just a gut-feeling!**

**bisoftMDE** stands for a perfect flow of information between machines, units and lines on the one hand and machine operators, foremen and management on the other. Via different possibilities for technical connections (OPC-UA/DA, MT-Connect, web interfaces, potential-free contacts and many more) quantities, stoppages, alarms, QS data as well as process values can be automatically recorded, visualized and supervised in real-time. Due to automation increases in production a gut-feeling is no longer sufficient. Critical success factors can be caused by deficiencies in machine and unit availability.

These can be visualized in form of individual key figures on large dashboards or smartphones or tablets. In addition alarms and disruptions can be transmitted directly to responsible persons. If required this information can be supplemented by photos or videos made on the spot. bisoftMDE demonstrably reduces costs and at the same time increases effectivity and quality of your production.

**bisoftMDE — for a transparent production**

# gbo datacomp — Innovation Made in Germany

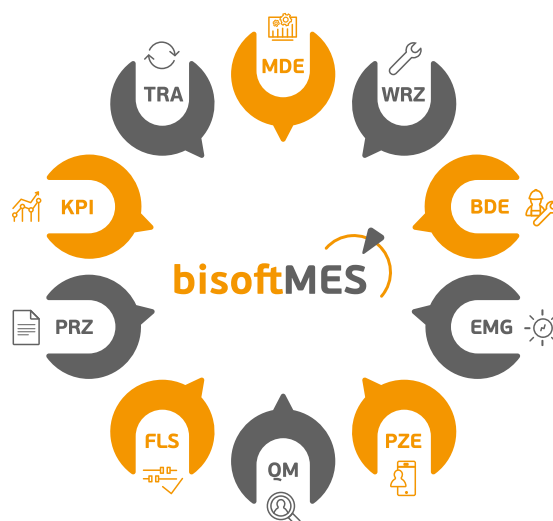

## Advantages at a glance:

- ▶ Automatic data recording results in time saving and improved data quality
- ▶ Online monitoring: short reaction times when disruptions and process anomalies occur
- ▶ Automatic sending of Information and alarms
- ▶ Individually planned web dashboards and comprehensive reporting
- ▶ Online data for controlling and post-calculation
- ▶ Reliable weak point analysis on basis of current stoppage data
- ▶ Key figure generator for your production key figures (KPI)

## gbo datacomp — transparent — efficient — cost-saving

**gbo datacomp** as an experienced provider of solutions in the production management systems (MES) sector will increase the competitive capabilities of your company visibly. More than 35 years experience in software development and project competence convince notable companies at home and abroad. Our solutions stand for more efficiency in manufacturing and production. Currently gbo datacomp takes care of more than 900 system solutions with 20.000 users and over 100.000 connected plants/machines worldwide.
