

bisoft Web Client

Mobile data recording
independent of time and location

bisoft Web Client

The Web Client permits recording and visualization of process and order times per PC or notebook browsers (i.e. Internet Explorer, Firefox, Mozilla, etc.) via internet or intranet. Workflow clearance can be optionally integrated. The user is thus able to carry out time account corrections and optionally plan and organize leave times (vacation, comp time, etc.).

In addition, recording via browsers on mobile units (Blackberry or mobile telephones) with GPRS, UMTS or WiFi is possible. The Web Client's responsive design permits bookings in browser, tablet or on smartphone. The Web Client adjusts to display sizes and depicts contents appropriately – everything at a glance.

**Bookings everywhere and anytime
increase your flexibility**

Ihr Nutzen im Überblick:

- Reduced and minimized processing times
- Authority for evaluations and bookings individually adjustable
- Information and overview available immediately independent of location
- Errors through manual transfer prevented
- No waiting or transit times
- Less workload for time-recording staff
- Cost reduction for material and peripheral units
- Send individual messages

WEB CLIENT OVERVIEW:

bisoft Web Client

The Web Client permits recording and visualization of attendance and/or project times by means of browser via internet or intranet. After registration (password protected entry) individually authorized functions are available to respective users.

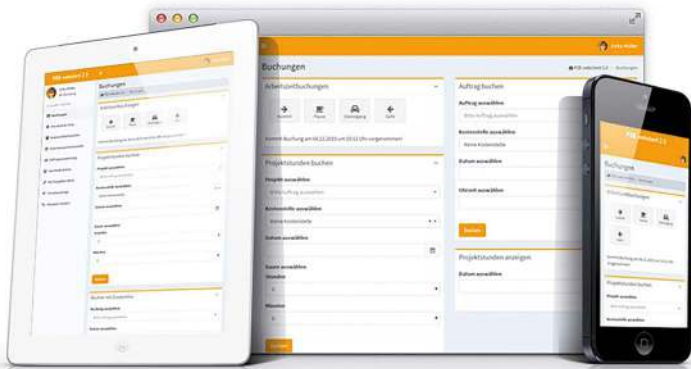

Optimized application workflow (vacation, seminars, etc) permit authorized users fast and simple access to file appropriate applications. The responsible supervisor can approve the application directly at his PC workplace.

Approved applications are automatically transferred into the time recording system.

Rejected applications can be returned directly to the applicant with suitable commentary.

Reports and queries available within the Web Client can be printed and/or issued in various file formats (CSV, PDF). An up-to-date web compatible browser is sufficient for the Web Client.

The fundamental responsive design ensures user-friendly utilization by depicting internet pages according to monitor size and/or device, enabling especially the use of mobile end units.

gbo datacomp

transparent – efficient – cost-saving

gbo datacomp as a comprehensive solutions provider in the area of production management systems (MES) will increase the competitive capabilities of your company. More than 30 years experience in software development and innovative hardware products have convinced notable companies at home and abroad.
